## ENDESA X AND CONSUM JOIN FORCES TO CHARGE ELECTRIC CARS

- *Endesa X will install 110 charging points in the 55 centres of the supermarket cooperative Consum in 11 Spanish provinces. The first 23 are already up and running and another 20 are about to become operational.*
- *The rapid chargers to be installed are rated at up to 50 kW, which means a vehicle can be charged in about half an hour, the time it usually takes customers to do their shopping.*
- *Consum thus becomes the first Spanish supermarket chain to implement an extensive public access recharging network - which can also be expanded - and offer its customers this new service.*
- *This agreement forms part of the electric vehicle charging infrastructure development plan Endesa presented last year which includes the installation of 8,500 public access charging points by 2023.*

**Madrid, 20 December 2019.** Endesa X and Consum supermarkets have signed a deal for an initial 110 charging points for electric vehicles to be installed in the car parks of 55 of the cooperative's centres. The first 23 are already up and running and another 20 are about to become operational. The charging points will be distributed throughout Andalusia, the Valencia Region, Castilla La Mancha, Catalonia and Murcia although the initiative will be expanded to more locations, and they will use 100% renewably-sourced electricity.

The rapid chargers to be installed are rated at up to 50 kW, which means a vehicle can be charged in about half an hour (depending on the particular vehicle and how much charge the battery has to start with), the time it usually takes customers to do their shopping. Users will have to have Endesa X's app [JuicePass](#) (available for [IOS](#) and [Android](#)) to activate the service and start the recharging process. It will not be necessary to register to use the app, since you can charge and pay each time with a credit card.

Creating a profile in the application and registering with JuicePass has several advantages for customers: the process is expedited; detailed information of charging points, prices and operating hours is available; charging particulars can be monitored in real time and your history of charges and invoices accessed; and there are discounts off the charging price.

Consum thus becomes the first Spanish supermarket chain to implement an extensive public access recharging network - which can also be expanded - and offer its customers this new service.

### **Endesa X: Developing public access infrastructure**

This collaboration agreement with Consum allows [Endesa X](#) to move forward in its plan to expand public access charging infrastructure for electric vehicles. Last year the company announced a plan to install 8,500 charging points in public access places by 2023, with an investment of €65 million, the most ambitious plan in Spain.

In this initial phase (2018-2019), Endesa X intends to establish a network of 2,000 charging points connecting major towns and cities with more than 35,000 inhabitants and Spain's 15,000 kilometres of major roads so as to ensure that 75% of the population has access to public charging infrastructure in their municipality. This will allow drivers to always have a charging point at a distance of less than 100 kilometres.

In the second phase (2021-2023), a further 6,500 new public access charging points will be installed in shopping centres, car parks, hotel chains, service stations and on public roads to cater to the growth in the electric vehicle market, providing greater charging infrastructure coverage in urban areas and the main strategic transport nodes both on the mainland and in the islands.
